

Achille Prete

Information Systems & Data Analysis Portfolio

Washington, DC / Maryland Area | Portfolio: achilleprete.com | GitHub: github.com/aprete83-dotcom | LinkedIn: available on website

PROFESSIONAL SUMMARY

Information Systems graduate with hands-on experience in facilities operations, asset management, data tracking, workflow improvement, and spreadsheet automation. Skilled in Excel, VBA, SQL fundamentals, data cleaning, reporting, and system coordination. Experienced in turning operational problems into structured processes, cleaner records, practical tools, and clearer reporting for decision-making.

CORE SKILLS

Data & Automation

Excel, VBA, SQL fundamentals, data cleaning, validation, dashboards, reporting, lookup logic, process documentation

Operations & Facilities

Asset inventory, maintenance request tracking, vendor coordination, key/access management, compliance support, issue follow-up

Information Systems

Asset management systems, work order systems, database concepts, requirements gathering, user support, testing, troubleshooting

Web & Portfolio Tools

GitHub, VS Code, Bootstrap, HTML/CSS, JavaScript concepts, GitHub Pages, dashboard design

PROFESSIONAL EXPERIENCE

Facilities & Operations Coordinator

Large Public Research University - Engineering / Research Environment | 2022 - Present

- Manage asset, maintenance, access, and operational data across multiple engineering and research spaces.
- Support inventory processes involving hundreds of equipment records, improving data accuracy and reducing discrepancies.
- Track and coordinate maintenance requests through work order systems, helping teams monitor open issues, follow-up actions, and service response.
- Develop Excel-based tools and reports to organize key records, package labels, asset information, service requests, and monthly operational activity.
- Use VBA and spreadsheet automation to reduce manual typing, improve consistency, and support student/staff workflows.
- Coordinate with faculty, staff, vendors, facilities teams, and administrative leadership to resolve building, equipment, and operational issues.
- Translate recurring operational needs into clearer processes, better tracking systems, and more reliable documentation.

Owner / Operations Manager

Custom Fabrication & Installation Business | 2011 - 2017

- Managed daily operations for a custom fabrication and installation company, including scheduling, purchasing, budgeting, invoicing, client communication, and project delivery.
- Coordinated projects from client requirements through production, installation, quality review, and final completion.
- Created pricing, tracking, and project management tools to improve quoting accuracy and workflow organization.
- Managed vendors, suppliers, contractors, and client relationships to ensure projects were completed on time and within expected scope.

SELECTED PORTFOLIO PROJECTS

Package Label Automation System

Developed an Excel-based tool for package processing. A student worker enters a requisition number, and the system automatically populates the package label with the correct information and prepares it for printing. The tool also checks whether refrigeration is required and adds "Refrigeration" to the printed label when needed.

Skills used: Excel, VBA, automation, data lookup, form logic, process improvement, user workflow design

Key Management Analysis

Designed a tracking and reporting system to analyze key activity, including new key requests, transfers, deposits, and monthly trends. The project demonstrates data cleaning, categorization, pivot tables, percentage analysis, and operational reporting.

Skills used: Excel, VBA, data analysis, process tracking, dashboard design

Asset Inventory Improvement

Created a structured approach to reviewing and correcting asset records across a large equipment inventory. The project focuses on data validation, discrepancy tracking, record cleanup, and process improvement.

Skills used: Data cleaning, asset systems, Excel reporting, workflow improvement

Temperature Monitoring & Facilities Data Tracking

Built a process to compare field temperature readings, system-reported values, and user-reported comfort issues. The project demonstrates how operational data can identify discrepancies, improve documentation, and support better service follow-up.

Skills used: Data tracking, issue analysis, reporting, operational documentation

Webcam Traffic Counter Dashboard

Developed a browser-based project concept to detect and count vehicles or pedestrians from video input and display results in a simple dashboard. The project demonstrates front-end development, data visualization concepts, and real-time tracking logic.

Skills used: HTML, CSS, JavaScript, GitHub Pages, dashboard design

EDUCATION

Bachelor of Science in Information Systems

Robert H. Smith School of Business, University of Maryland

Relevant focus areas include systems analysis and design, database concepts, web development, strategic use of information systems, project management, business process analysis, and data-driven decision support.

PROFESSIONAL FOCUS

Interested in Information Systems, data analysis, business operations, facilities technology, asset management systems, workflow automation, and process improvement. Focused on using data and technology to make operations more organized, measurable, and efficient.
